Table of Contents

Snapshot Logics

On the `Snapshot Logics` tab, you can assign logic sources to snapshot logics.
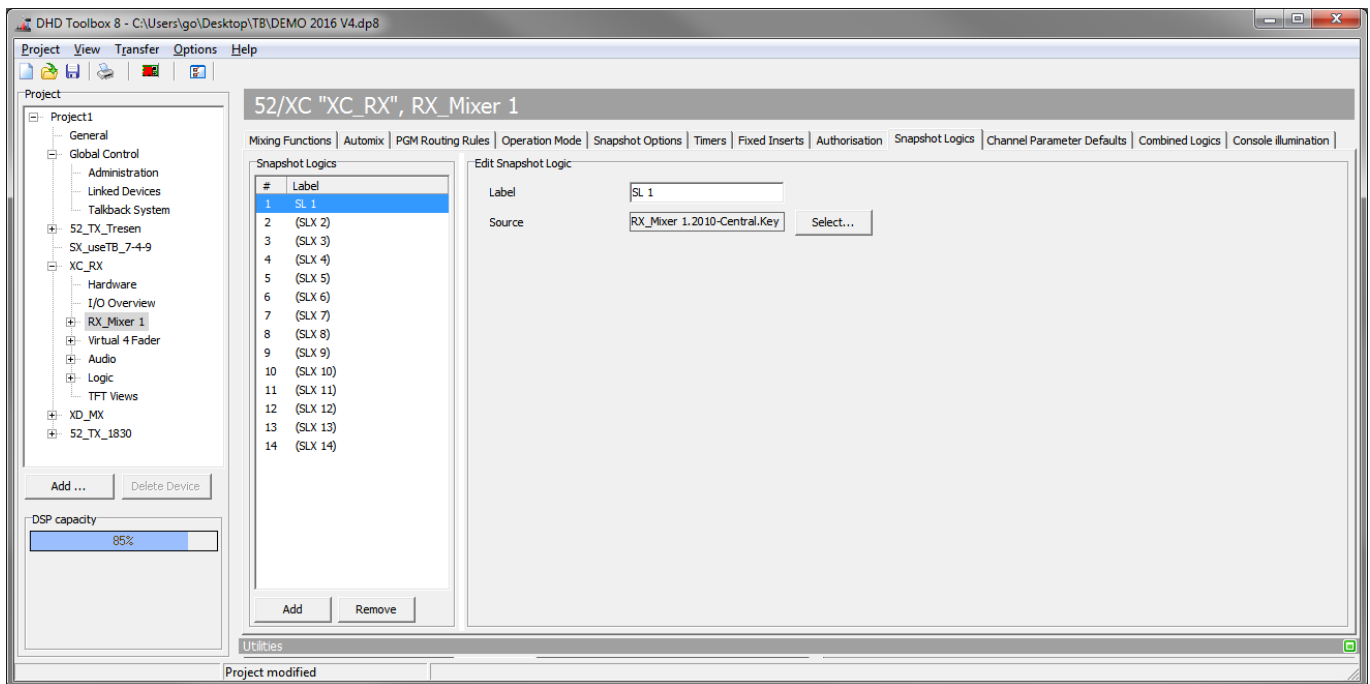

Snapshot Logics tab

If you use snapshot logics, it is possible to save the status of the assigned Logic source (e.g., a status of a user defined key or a fader function) and reload its status with loading a snapshot.

In the `Snapshot Logics` area, you can see a list with the available snapshot logics. Click `Add` to add a new snapshot logic to the list. Select a snapshot logic and click `Remove` to delete the selected snapshot logic from the list. You can create up to 150 snapshot logics.

To change the name of a snapshot logic, select the desired snapshot logic from the list. In the `Edit Snapshot Logic` area, type the name in the `Label` box.

To assign a logic source to the selected snapshot logic, click `Select` next to the `Source` box. The `Logic Sources` window opens. Select a logic source and click `Assign`, alternatively you can double-click the desired logic source or use drag & drop.

If you want to save snapshot logics in your mixer snapshots, select the `Snapshot Logics` check box on the `Snapshot Options` tab. (See Snapshot Options)
